Your Home... Your Choice...

Set the number. Count the delivery.

Not a credit. A delivery. Keep the gas systems you have: it's already in Local Law 97.

Your Home... Your Choice...

Local Law 97 lets my building comply with low carbon gas in the boiler I already own.

Who decided I have to rip it out and buy a heat pump?

Set the number. Count the delivery.

We support Local Law 97 as written... no changes necessary. We're asking the City to use all of it. The law scores your building by the energy you use, times a "***number***" for each fuel. The Council wrote in that "***number***" for electricity, gas, oil and steam, and told the Buildings Commissioner to set it for every other fuel (§ 28-320.3.1.1(7)). DOB set one for biofuels. It hasn't set one for low carbon gas.

Not a credit. A delivery.

When DOB sets the "***number,***" it also has to count the gas a building actually buys and has delivered through the pipeline to its own meter, backed by a supply contract, a transportation contract and a verified carbon intensity. That's not a certificate bought on the side. It's how every therm on your bill already works.

Your Home. Your Boiler. Your Money. Your Choice.

What to do. Call your elected official and ask that they kindly request our friends at the DOB set the "***number***" and count the delivery, as the law directs. Then ask your gas supplier for low carbon gas delivered to your meter, with the carbon intensity in writing. You don't have to buy ours.

We hope you choose StandardRNG, but you having a choice matters more.
